

Middle East Renewables Potential

The Middle East is in the news recently for many of the wrong reasons, but assuming conflict is managed and diminishes, the region has massive development potential.

Noah Smith points out in a recent post that the combination of stability, a demographic dividend, and high investment could turn the region into a renewables powerhouse. Most importantly, as with fossil fuels, the Middle East sits on some of the most favorable real estate for solar power generation.

Middle Eastern government are planning to take full advantage of their geography with solar installations as part of the energy transition.
